Copyright © tutorialspoint.com

Description

The method **max()** returns the max alphabetical character from the string *str*.

Syntax

Following is the syntax for **max()** method:

```
max(str)
```

Parameters

- **str** -- This is the string from which max alphabetical character needs to be returned.

Return Value

This method returns the max alphabetical character from the string *str*.

Example

The following example shows the usage of max() method.

```
#!/usr/bin/python

str = "this is really a string example....wow!!!";
print "Max character: " + max(str);

str = "this is a string example....wow!!!";
print "Max character: " + max(str);
```

Let us compile and run the above program, this will produce the following result:

```
Max character: y
Max character: x
```
